

# Red Planet News: August 2011

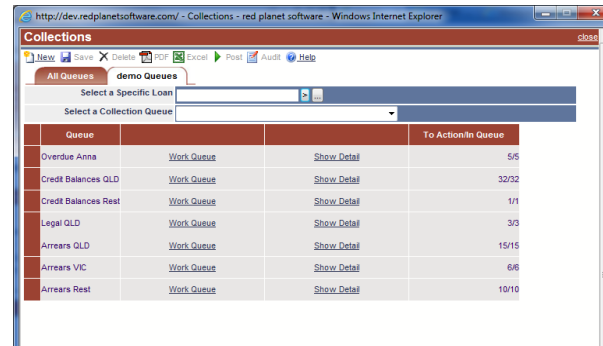

## Drag and Drop

The Odyssey notes tab has been enhanced to include a "drag and drop" area to simplify attaching documents to notes. Simply drag the document from your desktop or folder to the box instead of having to go through the Browse procedure. The Browse option is still available if you prefer to attach documents this way.

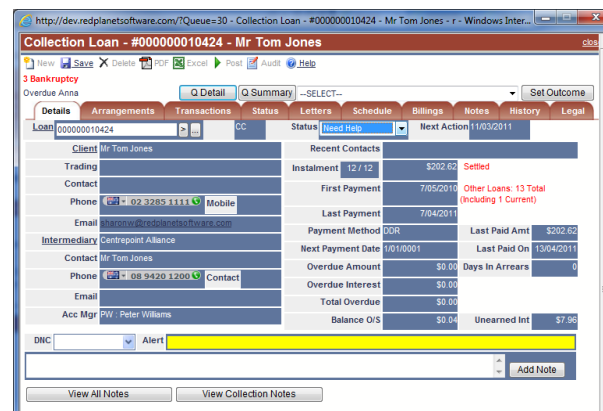

## Collections

Red Planet have now developed a Collections module to assist with the following up of arrears. Below is an example screen that shows a summary of arrears loans by collections queues.

The user then selects the queue they wish to work on and the system prompts them through loans in that queue that need actioning and add comments, alerts, set next follow up date, setup new payment plans and many other options.

If you are interested in purchasing this module and would like an onsite demonstration, please contact Peter Williams ([peterw@redplanetsoftware.com](mailto:peterw@redplanetsoftware.com))

## Premium Funding Interface 4

Ebix and Red Planet have released Phase 4 of the broking system to premium funding system interface. This allows the broking system to request a quote without the user seeing the Funders web site quote program. The broking system sends the client and policy details as normal, then the funding system web site calculates the repayments and returns the quote number and PDF of the contract documents to the broking system for printing automatically.

This represents an opportunity to further increase funding penetration by yet again making it easier and quicker for a broker to obtain a funding quote.

Of all the broking systems, today only E-Global supports this enhancement. With a bit of encouragement from funders, I'm sure other broking software vendors could follow suit.

**We appreciate hearing from our clients so if you have any feedback or ideas to build on these enhancements, please email [peterw@redplanetsoftware.com](mailto:peterw@redplanetsoftware.com)**
